

EventHub Sprint Planning Notes

Team: PO4-02

Sprint: 3

Date: 25/9/2025

Attended: Agam, Lucas, Yunie, Zac

Scrum Master: Lucas

Product Owner: Dale

Development team: Agam, Lucas, Yunie, Zac

1. Goal

This sprint aims to deliver the final product of the *EventHub* application, fulfilling the requirement that the software should 'allow university clubs and students to organise and join events'. The sprint will focus on completing the remaining features, specifically the extension feature of email notifications, and any remaining tasks unfinished from Sprint 2.

2. Duration of the Sprint

2 weeks

3. What is the team's vision for this sprint?

User Stories Being Added to Sprint Backlog for Sprint 3

User Story	Justification
Navigate from Table Entry to Detailed View #231	Users should be able to go to Event Detail Page by clicking on the entry on the table.
Browser Navigation Buttons Skip Transient Pages #234	Website should run smoothly without getting caught in loops, and should skip transient pages
View Event Photos for Event Detail Page #247	Students should be able to view the photos of the event
Event Reminder Email #260	EXTENSION FEATURE – students should get email for upcoming RSVP'd events
Clear and Consistent Website Styling and Usability #253	UI consistency is essential for clear, intuitive user experience
Organiser Photo Upload for Event Detail Page #14	Event organisers should be able to upload images of their event for the event detail page
View Event Feedback #12	Event organisers should be able to view the feedback students left on their past events.

User Stories Remaining in the Product Backlog for Sprint 3

N/A

Potentially Shippable Product at the End of the Sprint

User Management

- Students and club organisers can register an account and log in securely.
- Authentication ensures that only valid users can access the system.
- User sessions will be maintained for smooth navigation across features.
- There exists an admin that cannot be deleted or banned.

Club and Event Management

- Club organisers can create clubs, which will automatically assign themselves as organisers.
- Organisers can create events with information including title, description, date, time, and location.
- The system will persist these records in the database after creation.
- Club organisers can upload images of their events that will be displayed on the event detail page.
- Club organisers can view the feedback and ratings left by attendees of past events.

Event Discovery and Participation

- Students can browse and search events.
- Event pages display detailed event information with images that the club organiser has uploaded (if applicable).
- Students can RSVP to events.
- Students can leave feedback and ratings for past events they have RSVP'd to.
- Each user can view a personal list of events they have RSVP'd to.
- The system also provides a list of all upcoming events, giving users an overview of what is happening across the platform.
- Students will receive an email notification reminder for their upcoming RSVP'd events the day before (9 am).

Navigation and Usability

- Working allows navigation between all pages (excluding sign-in/sign-up pages)
- The UI will be simple but functional. We will prioritise clarity over styling at this stage.

Estimation in story points

View Event Photos for Event Detail Page: 5

This feature is estimated to be 5 points because it requires implementing a gallery/carousel component on the event detail page that dynamically loads multiple photos from the BLOB database. It will also involve handling image retrieval, responsive display, and ensuring smooth integration with the event's data model

Navigate from Table Entry to Detailed View: 2

This task is estimated to be 2 points because it involves setting up routing from a table entry to its corresponding detailed view. It requires click handlers and ensuring the correct ID is passed through the navigation.

Browser Navigation Buttons Skip Transient Pages: 2

This is estimated to be 2 points because it will manage browser history and navigation flow so that transient pages are skipped when using the browser's back and forward buttons.

Clear and Consistent Website Styling and Usability: 3

This feature is estimated as 3 points because it requires a consistent design system across all pages using a shared stylesheet or component library

Share Event: 3

This is estimated to be 3 points because it involves creating functionality that allows users to share event details by acquiring a link to the event details page. If the user who opens the link is not logged in, it will lead them to the sign-in page.

Organiser Photo Upload For Event Detail Page: 5

This task is estimated as 5 points because it requires implementing file upload functionality for organisers, including backend storage, file validation, and linking uploaded photos to the correct event. There would also be additional work ensuring proper display and handling of image upload errors.

View Event Feedback: 5

This feature will be estimated as 5 points because it will require fetching and displaying feedback data linked to each event. It will include both backend integration for retrieving stored feedback and frontend design for a clear and organised presentation.

RSVP Confirmation Email: 3

This will be estimated as 3 points since it will involve implementing automated email functionality triggered after a successful RSVP. The work will include setting up templates, configuring the mail service, and verifying that dynamic event details populate correctly.

Student gets an email notification if an event gets cancelled: 2

This task will be estimated as 2 points because it will involve triggering an email notification when an event status changes to “cancelled.” It will require minimal logic for event status monitoring and template-based email generation.

Event Reminder Email: 2

This task will be estimated as 2 points because it will involve triggering an email notification when an event status changes to “cancelled.” It will require minimal logic for event status monitoring and template-based email generation.
